

BUSINESS AUTOMATION SOFTWARE

Increase your company's valuation up to 100% by having a fully digitized system and single source of truth.

Where Money is Saved

- Significantly improved project execution due to improved planning and monitoring tools.
- Dramatically reduces errors due to supply chain mistakes.
- No IT overhead required.
- Saving money on digital hardware by using cloud based system.
- No more spending on numerous software licenses.
- Have multiple application functions in one system.
- Costly errors between prototype engineering and the manufacturing floor are reduced due to real-time communication.
- Dramatically reduce errors and time spent entering data.
- Keep your intellectual property at hand regardless of who may leave the company.
- Generational transition of the business is streamlined and losses are reduced.

Where Money is Made

- Plan projects with precision and calculate costs before buying physical assets to know your real margins before your product is made or project is executed.
- Due to inflation and volatile markets, you can receive automatic price change updates from suppliers giving you an edge in the marketplace.
- Make faster-clearer decisions with more confidence by having all the relevant data in real-time.
- Respond to customer requests and beat your suppliers by providing automated cost estimates.
- Less time spent on fixing internal process and communication errors and more time to creatively expand the reach of your business.

Growing Your Company

- Grow your business and penetrate new markets without having to hire more people.
- Move into new facilities with minimum infrastructure management required.
- Easily replicate and scale up your exact process in multiple facilities.
- Acquire other companies without additional investment into digital infrastructure.

Expand your company into new markets and seize more opportunities with scalable automated software.

Real-time, Everything.

FIT ERP+ utilizes its proprietary "Digital Backbone" + unmatched business expertise to solve the most complex business challenges.

Whether you're looking to **improve** customer engagement, **manage** projects and inventory more efficiently, or **optimize** back office functions ...

ACCOUNTING INTEGRATION

- API Gateway
- Real-Time Financial Reports

REPORTING

- Exec KPI Dashboard and Reporting
- Data Driven Insights

FIT ERP+ business automation software is the partner you need to **increase** revenue/profits, **achieve** operational excellence, **scale** for growth and gain a competitive advantage.

CRM

- Google Mail Integration
- Data-Driven Insights
- Automated Notifications
- Sales Pipeline Tracking

INVENTORY MANAGEMENT

- Geo-Info Systems for Interactive Inventory Levels
- Project Site Inventory Management

PROJECT MANAGEMENT

- Safety Compliance Tools
- Workflow Automation
- Planning & Time Tracking

SAFETY COMPLIANCE

- Digitize Safety Systems & Forms (Ex. FLHA's)
- Real-time Safety Data
- Audit Ready

BUYING

- Supplier Management
- PO Automation
- Inventory Integration

SELLING

- Data Driven Insights
- Seamless CRM Integration
- Quotation Automation
- Revenue Optimization

MANUFACTURING

- End-to-end Production Automation
- Production Scheduling & Monitoring
- Real-Time Data Analytics

PROTOTYPING

- Data Driven Decision Making
- Quality Control & Compliance Automation
- Production Line Workflow Modeling

GOOGLE MAIL
File Integration

GOOGLE DRIVE
Secure File Integration

DOCUMENT MANAGEMENT

- Central Repository
- Document Linkage
- Version Controls

Problems We Solve

- Losses in revenue due to miscommunication and data translation from one system to another.
- Take advantage of supplier pricing controls and volume discounts.
- Underestimating the cost of operations, timelines, projects and products.
- Overcommitment of time and resources to customers.
- Unreliable margin control of products before they hit the marketplace.
- Large overhead cost in staff and infrastructure that tie up resources that could be used in operations, marketing/sales and product development.
- Aging software and need for constant costly upgrades.
- Losing project bids due to inability to deliver an accurate detailed cost and time estimate.
- Cookie cutter software enterprise systems that don't fit all your business needs.
- Finding a competent software solution that is local and understands your specific marketplace, business challenges, and plans for future expansion.

What Does it Do?

- Connects your company's various internal departments to seamlessly integrate all processes and documentation.
- Connects your company and suppliers with an interactive portal which allows for seamless integration of information across the entire supply chain.
- Customer portal allows your customers to share and maintain detailed documentation for warranties, invoices, tracking numbers, shipping, and servicing.
- Provides for excellent compliance in documentation and information sharing and storing.
- Helps you manage your projects better.
- Field and mobile capabilities allow for extended quality control, geo-location, and image management functions.
- Provides seamless inventory management and control in local and remote locations using any device.
- Mobile document access allows for field personal scheduling, field permits, and other information to be accessed on-demand.
- Smooth integration between engineering and the manufacturing floor.

What does it cost?

- Comparable to the cost of hiring one middle manager for one year but gives exponential performance 24/7.
- Your return of investment on the software in 1 year, proven by our study with previous clients, could pay for the cost of the software.
